Effective international knowledge exchange to rehabilitate rivers in urban delta's: case study Metropolitan Manilla

**ABSTRACT**

**INTRODUCTION**

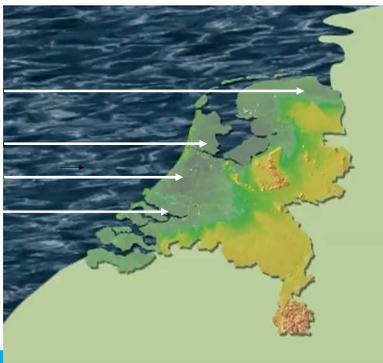

## Presentation 'Research Development Philippines' (RDP)

- Introduction
- Method
  - RDM approach
- Results
  - Practical applicable solutions
- Conclusions
- More info
- How to get involved

RDP: Water in a changing world  
 share your talent. move the world.

## Introduction: 'small RDM approach'

  

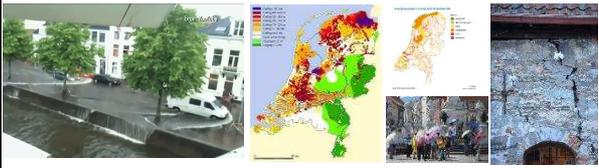

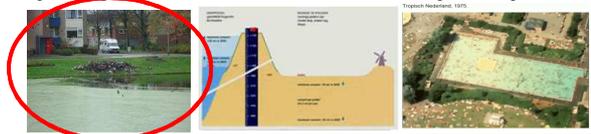

- Research
- Education
- Consultancy

inspiring change

## Challenges urban climate (change): Netherlands

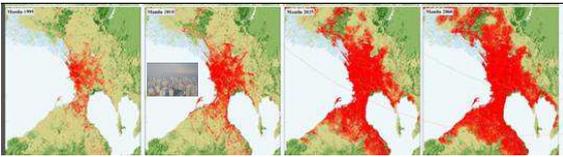

examples of problems in the urban areas: floodings, degradation of waterways, heatstress, drought leading to lower groundwater table and subsidence with results as damage of buildings

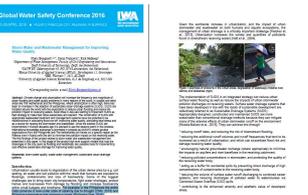

Boogaard F.C. Climate adaptation from Groningen to Mae Phaem. Inaugural speech on Spatial Transformations – Water, ISBN 9789081935692 Kenniscentrum Noorderruimte Hanze Hogeschool, Groningen, February 2016.

## Why 'Research Development Philippines' (RDP)?

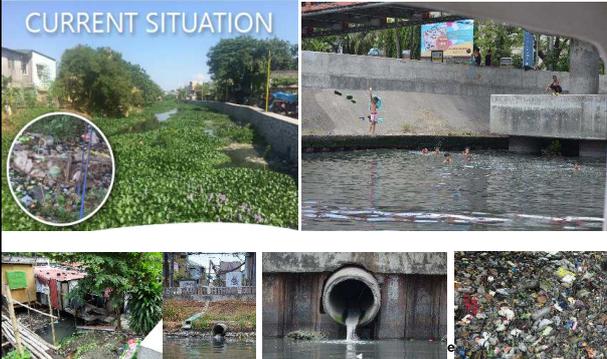

population growth Manila (1995, 2010 and prediction till 2035 and 2060)

## Current situation: waterquality and risks

### CURRENT SITUATION

## We share challenges

## Lessons learnt The Netherlands

how did we achieve this Waterquality?

- Determine situation & ambitions
  - Regulations
  - Education: public awareness
    - Improving the sewer system
  - Cleaning up emissions
  - Monitoring
  - Waterquality improvement
  - Evaluation & governance
- Lessons learnt: RDM approach

## The RDM-approach

### 'Research Development Philippines' (RDP)

## Action: concrete results RDF

- Stakeholder analysis
- Assessment of the local situation
- Identifications of ambitions
- **Cleaning up solid waste that floats in the river**
- Initiate behavioural changes to prevent river pollution
- Improving the drainage system
- **Education: public awareness (waste management, circular economy)**
- Implementing innovating nature based solutions
- **Monitoring of water quality by means of low-cost sensors in the river**
- Evaluation & governance

## Stakeholder analyses & engagement

### Top down and Bottom up

## Stakeholder analyses, engagement and commitment

### Top down: MoUs, agreements, contracts

## Design thinking Video impression:

## Waste management 'The Longganisa': design and implementation

## Waste: (inter-)national comparative cases

## Micro pollutants: Innovation in mapping waterquality RDM-approach: Research, training engagement

## Upscaling to Indonesia, India, China, ... New skills and technologies

## CONCLUSIONS

- RDManila was effectively established
- The 'Meet in the middle' strategy resulted in engagement of all stakeholders
- Concrete results:
  - New monitoring methods are developed and water quality is mapped
  - Tailor made solutions designed and implemented
    - Longanisa to catch waste
    - Next step is micropollutants trap (treatment trains)
- RDManila implementation resulted in interest around the world.
- Upscaling and implementation in the upcoming years
